EP 2 XL – Electric Utility Vehicle

The EP 2 XL is a versatile electric utility vehicle designed to support the day-to-day demands of commercial sites, estates and outdoor working environments. Combining a practical load-carrying design with comfortable driving and efficient electric operation, it provides a convenient solution for transporting equipment, materials and personnel around larger facilities.

With its open cargo bed and compact design, the EP 2 XL is well suited to a range of applications where reliable on-site transport is essential. From facilities management and grounds maintenance to leisure facilities, industrial sites and public sector environments, it offers a practical alternative to traditional petrol and diesel utility vehicles.

At ePowerTrucks, we understand that every site has different transport requirements. The EP 2 XL offers a practical electric utility vehicle solution for businesses and organisations looking to improve the efficiency of their day-to-day operations.
